Skeletal allometry: each element against geometric−mean skeletal size

Points = specimens (log−log). Red line = fitted slope (shaded = 95% CI). Dashed grey = isometric expectation (slope = 1). Facet label: fitted slope (b), R^2, and isometry verdict (S12).

McIV (b=1.33, R^2=0.87, positive allometry)

Pteroid (b=1.15, R^2=0.88, positive allometry)

WingPh1 (b=1.11, R^2=0.96, positive allometry)

Tibia (b=1.07, R^2=0.94, positive allometry)

Femur (b=1.05, R^2=0.94, positive allometry)

WingPh2 (b=0.98, R^2=0.95, isometric)

MtIII (b=0.98, R^2=0.89, isometric)

Ulna (b=0.95, R^2=0.97, negative allometry)

Humerus (b=0.92, R^2=0.96, negative allometry)

WingPh3 (b=0.86, R^2=0.87, negative allometry)

Torso (b=0.84, R^2=0.89, negative allometry)

WingPh4 (b=0.74, R^2=0.56, negative allometry)

log(Element length)

log(Skeletal size)
